

Mosses with Hand-Lens and Microscope A Non-Technical Hand-Book of the More Common Mosses of the Northeastern United States Volume 2

By Abel Joel Grout

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 116 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 edition. Excerpt: . . . from *P. fontana* chiefly by the rudimentary cilia of the inner peristome and by the erect lanceolate acute perigonal leaves with the costa percurrent in inner leaves. The inner perichaetal leaves are said to be shorter than the outer, and Sullivant says the leaves lack the plicae of *P. fontana*. *BARTRAMIA* Hedw. The Bartramias grow in moist niches in cliffs and on moist shady banks, looking much like tufts of green wool. Their capsules are globular and somewhat unsymmetric when moist, but dry with regular folds and alternate ridges. When very dry the body of the capsule becomes so shrunken as to be smaller than the mouth of the capsule itself. The leaves are long and slender and somewhat curled when dry, and strongly papillose. *B. CEderi* is somewhat of an exception as regards leaf characters, and by recent writers is put in the...
