THE CHANGING BRAIN: ALZHEIMERS DISEASE AND ADVANCES IN NEUROSCIENCE

Oxford University Press, USA. Paperback. Book Condition: New. Paperback. 272 pages. Dimensions: 8.5in. x 6.7in. x 0.7in. In *The Changing Brain*, Ira Black tells the fascinating story of modern neuroscience. A rich, multifaceted tale spanning a century and taking place on multiple continents, it moves from Fascist Italy, with the discovery of nerve growth factor (NGF) by a young scientist working secretly in a makeshift laboratory in her bedroom, to current experiments in which transplanted, laboratory-grown cells lead to recovery and function in damaged brain regions. In the mid 1990s, a revolutionary new conception of the brain emerged--instead of the traditional view that the brain's role in perception, memory, learning, and emotions was based on a static, non-renewable network of brain cells and connections, research revealed that the human brain is an ever-changing, fantastically complex system that is continually being shaped and reshaped by a subtle interplay of genetic clues and life experiences. To bridge the gap between abstract concepts and real-world experience, Dr. Black draws upon his expertise as a clinical neurologist to provide a dramatic account--the fictionalized story of a successful investment banker named Enoch Wallace and his battle with Alzheimers disease--that vividly illuminates the narrative. From his first fleeting memory lapses to his final descent into dementia, each step in Wallace's decline becomes a window into another aspect of brain function and the latest groundbreaking research in neuroscience. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
